

Drawered Racks

The 5 Star range of Drawered Racks offer a versatile solution to many applications. From the Heavy Industrial staple, these cases are constructed from the usual high quality 9mm birch plywood, which is bonded to a tough high pressure laminate exterior (HPL), available in a selection of colours. 30mm aluminium angle and hybrid location are fitted to all exposed edges, together with heavy duty zinc-plated ball corners.

Recessed flip handles and large butterfly catches ensure durability, by means of groove-riveted fixings. 4" castors are fitted to the base, of which at least two are braked. On hinged door versions, a fifth castor is included which supports the weight of the door when opened.

Many versions of these Drawered Racks are available, with many combinations of drawer quantities, depths and layouts, but our three standard options can be found below.

Type 3

Type 1 - Hinged door with multiple drawer options. Included in the front door is a handy three-section compartment. A smart, recessed bar handle is included to make opening the door a breeze.

Type 2 - Similar to Type 1 but with an option for a quick assembly Leg System. This feature turns the front door into a very handy, self-supporting table. When in transit, four tubular steel legs are clipped on the inside of the door recess. The four legs simply screw into threaded receptacles, making an extremely quick setup.

Type 2

Type 1

Gas strut fitted to Type 3

Type 3 - Again, similar to Type 1 but this version not only has a hinged front door but also a hinged top lid. When raised, this top lid gives access to a very useful worksurface. This worksurface is simply screwed on, so eases replacement when eventually it may show signs of wear. To prevent accidental slamming shut, the hinged top lid features high quality gas struts, which helps to keep the lid in the open position.

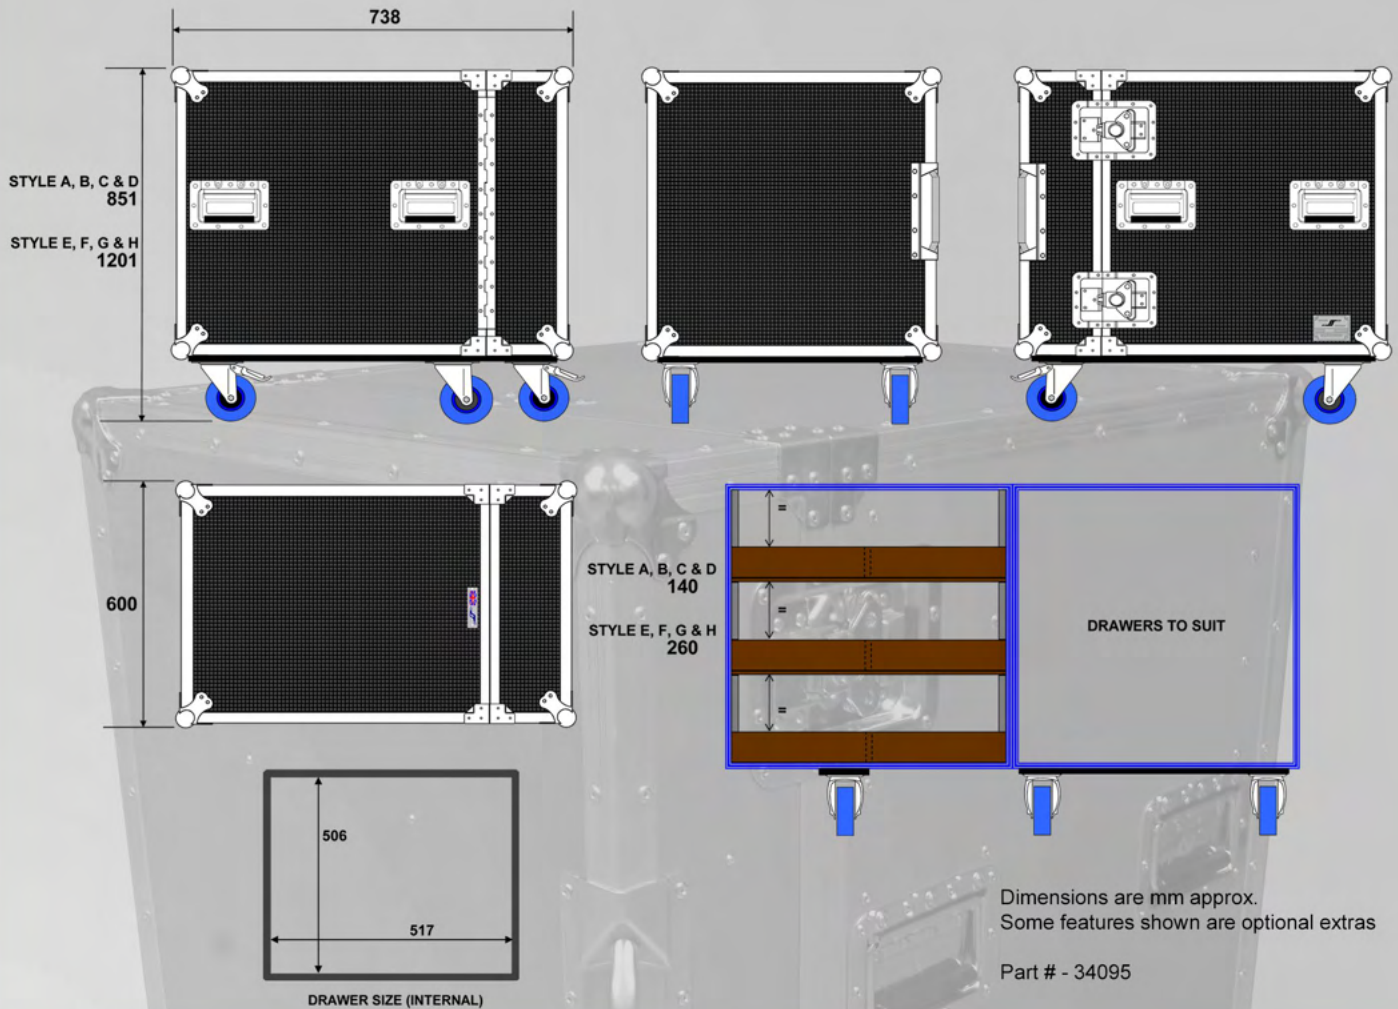

All the drawers are mounted on high quality ball-race telescopic slides.

Drawered Racks find uses in many applications and industries including Lighting & Sound, Engineering, Motorsport and Audio Visual.
